# PERFORMANCE FEATURES

## High-Traction, Two-Wheel Drive Improves Rough Terrain Performance

A standard, no-spin differential drive train delivers exceptional traction for off-slab drive performance. The powerful hydraulic drive motor delivers 35% gradeability, with a 4.5 mph (7.2 kph) drive speed for improved mobility between work locations. Automatic brakes are spring applied and hydraulically released.

## Big Machine Performance in a Compact Design

Measuring 5 ft. 9 in. (1.75 m) wide and 7 ft. 5 in. (2.13 m) high in the stowed position, the Model 26MRT's compact size allows versatility for off-slab use on rough terrain or inside buildings in narrow aisles. When fitted with optional fold-down platform rails, stowed height can be reduced to 6 ft. 3 in. (1.9 m), allowing movement through standard double doorways.

# PERFORMANCE FEATURES

## Proportional Controls for Smoother Operation

**Platform Console.** The platform control console features full proportional drive with thumb steer for one-hand operation. A simplified console layout orients the operator. High-contrast colors and large graphic function symbols facilitate control identification. An electronic enable pushbutton system is intended to reduce the occurrence of inadvertent operation of the controls and automatically shuts off if a function is not operated within the preset time period.

**Ground Console.** Accessible location, high-contrast colors, and large graphic symbols facilitate console operation. The manual descent system can be operated from the chassis to lower the platform in an emergency. An optional status indicator light panel provides information on alternator, engine oil pressure, engine coolant temperature, and hydraulic oil filters.

## All-Steel Platform and Standard Roll-Out Extension Deck

Rugged, all-steel platform is construction-tough and features a standard roll-out 3-foot (91.4 cm) manual extension deck. The platform railing, built of 1-1/4-inch (3.2 cm) square steel tubing, is intended for rigorous jobsite use. All-steel deck treadplate provides skid-resistant footing.

## Compact, Powerful Engines With Automatic Electronic Power Management

Versatile powerplant choices meet a variety of applications. Three-cylinder, water-cooled engines are available for gasoline, gasoline/LP, and diesel fuels. An Automatic Electronic Power Management System monitors the engine RPM and controls the variable displacement transmission pump. Efficient fuel consumption and a 7.8 gal. (29.5 L) fuel tank permit a full day's operation with quick refilling for extended duty cycle operation.

## Wide-Stance Scissor Arms for Enhanced Stability

Scissor arm pins and bearings feature no lubrication, tighter tolerances and a wider stance to reduce arm deflection and sway. Constructed of rectangular steel tubing, end-capped scissor arms help reduce internal corrosion.

## Standard High-Flotation Tires

For improved off-slab drive performance, high-flotation terra grip tires reduce the ground bearing pressure for improved traction. For increased traction on rough terrain, optional lug tread tires (shown) are available.

## Low Maintenance Cuts Ownership Costs

Time-consuming lubrication is now a thing of the past. All Model 26MRT scissor arm pivots use self-lubricating fiber wound bushings and corrosion resistant nickel-plated pins. Steering linkages do not require lubrication. The hydraulic lift cylinder uses a bolt-on head ring, allowing disassembly with hand tools.
